

GEOCERAMICA®

Porcelain + Paver

APPLICATION &
DESIGN INSPIRATION

The Best of Both Worlds

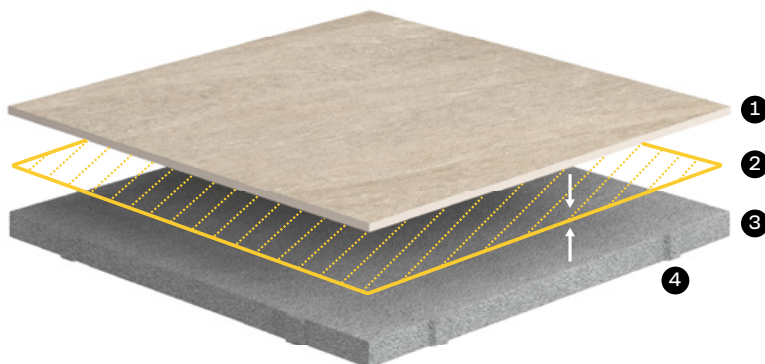

GeoCeramica® represents a considered evolution in exterior surfacing combining the refined aesthetics of outdoor porcelain with the structural integrity of a concrete paver base.

By permanently bonding a 10mm porcelain surface to a high-performance concrete layer using AquaFerm® technology, GeoCeramica® delivers dimensional stability, simplified installation, and long-term durability in demanding climates.

Developed and proven across Europe in residential and public environments, GeoCeramica® bridges architectural design intent with practical constructability. It is not without reason that GeoCeramica® has been awarded the prestigious German Design Award and the Red Dot Design Award recognition of its innovation, performance, and material expression.

Designed for modern exterior environments, engineered for clarity in specification.

TECHNOLOGY

- 1 **Porcelain Surface Layer:** Premium outdoor porcelain tile with long-term colour clarity and rich surface textures.
- 2 **AquaFerm® Bonding Layer:** Patented moisture-activated technology that securely fuses the porcelain to the concrete base.
- 3 **Stabikorn® Concrete Base:** High-strength, permeable concrete engineered for freeze-thaw resistance and stability.
- 4 **Integrated 3 mm Spacer Bars:** Precision spacing built into every unit for consistent joints.
